REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

In independent claim 1, "wherein historical process data from an actual earlier process run-through are fed into and processed by the PLC or another PLC program logic in the same way as if said process data had come directly from the plant periphery", in combination with the other claimed elements and features is not taught nor fairly suggested by the prior art of record.

In independent claim 15, "a data stream controller for the flexible transfer of archived process data to at least one programmable logic control for controlling the plant, to provide output data that are again feedable into the PLC or some other PLC in the same way as if said output data was process data coming directly from the working unit periphery", in combination with the other claimed elements and features is not taught nor fairly suggested by the prior art of record.

3. Prior art

Kolchinsky discloses internal operations of processor and therefore does not deal with the aspects of a industrial plant control.

Schwenke et al. disclose an industrial plant which includes a PLC. Also it discloses PLC memory in which input and outputs are stored. This data is simulated not from real process data. Schwenke et al. does not disclose processing real historical data from an actual earlier process run-through by a PLC.

Burshtein et al. discloses a PLC and recording times of events. These event are cyclical stored in a buffer. This invention only processes event stored by a PLC. Burshtein et al. does not disclose what Schwenke lacks.
